Used to Be a Pizza Hut

These beautiful structures, most likely now devoid of the table-top Pac Man machines, dot the American landscape. Some provide ethnic food, some, used cars, and a rare few are now municipal buildings. Whatever their current purpose, we can always be reminded of the mediocre pizza that was once served in these establishments. That, and those red plastic cups.

Submit your photos of establishments that used to be Pizza Huts to: utbaph@gmail.com

5 Tell a story.
Where are you?
- Home in the Dining Room

Who are you with?
- Alone

What are you doing?
- Drinking Coffee, Writing a talk

11:59am
- I was at bombay cuisine eating with Mira and Wendy.

1:30pm
- I was at home in the living room reading a magazine with Wendy.

3:13pm
- I was at home in the living room talking with Wendy and Mira.

4:24pm
- I was at home in the living room watching basketball with Mira.

6:11pm
- I was at home in the living room

Last entry at 10:00am on 3/18
I was at home in the living room watching thunderstorms with Mira.

I was at home in the living room talking with Wendy and Mira.

I was at home in the living room watching basketball with Mira.
Research cannot create change in an organization until it’s turned into a compelling story.
AMANDA MCGUIRE
SCIENCES UNDERGRADUATE

20 years old // Biomedical Sciences major // Grand Rapids, MI

NEEDS

• Concerned with the quality of her sources. Checks recency, impact factors, and reads abstracts to determine relevance.
• Only interested in sources with full-text online.
• Has a few strategies that worked in the past, and tries those for each new project. Unsure where to start research on unfamiliar topics.
• Confident she can figure things out on her own without asking for help. Prefers to use self-service help if available.
• Overwhelmed, busy, and impatient.

SERVE BY

• Make it easy to start new research, whether on a broad or narrow topic.
• Show abstracts, impact factors (citation counts, journal names, authors & affiliations) where possible in results lists.
• Offer self-service help, as well as research guidance.
• Remove barriers to doing quick research, including redundant or extra steps, page load speeds, and unfamiliar navigation patterns.

“Full-text online is very important to me. I don’t have time to request things.”

"Full-text online is very important to me. I don't have time to request things."

NEEDS

• Easy way to find relevant material for assignments.

• Not sure where to start his research, but willing to ask for help.

• Only looks at the first few results in a search before determining if the search was successful. More likely to start a new search than use facets.

• Likely to follow rabbit holes in research, and to request an item that seems useful if we don't have it.

• Likes having full-text online, but knows that some things can only be found in books.

• Make it easy to start a broad search across many of our resources (articles and books)

• Making it easy to request items that we do not have access to through MeL or Document Delivery.

• Offer self-service and in-person help, as well as research guidance.

I asked folks visiting the hours page what they were looking for. Over a third responded to the survey, and here is what we found:

01. Are you looking for library hours for:

- Today: 75%
- Tomorrow: 25%
- Next week: 0%

Note also that the half of the "Next Week" responses came on Saturday, which could be interpreted as being for Monday.
September 20, 2013

**Data Entry Bounty**

Some of you may know that I look at our feedback from a lot of different places. I have an hour blocked off on my calendar every Monday to read emails, chats, and tweets that came in to the library over the past week. I also read through all of the questions added to LibStats, and poke around on our Google Analytics and our own custom reporting tools for the dozen or so different web tools we have here at the Libraries.

While some of this stuff gets automatically recorded, a lot of it relies on our staff and students manually putting things into databases. I always try to acknowledge credit to folks who have found and reported problems that get fixed, but now I'm making it official.

**Data Bounty**

If you log some data as part of your job, and it helps me fix a problem, you'll get a public shout-out and I'll buy you a coffee. (Or a tea or a candy bar or whatever.)

You don't even need to tell me about the problem! If you put something in LibStats, or help a patron on chat, I've already been notified. All you have to do is keep up the good work, except with extra caffeine.

The thing is, entering this data is not always rewarding. In fact, most of the folks I've talked
Usability Test Roundup – February 2014

This morning we had another usability test with three students in the Mary Idema Pew Library. We used the same questions as our last test, but this time focused on Summon 2.0 and whether some of our tweaks to the catalog helped users with their difficulties. The questions were:

1. You are writing a paper for Writing 150 on whether video games and violent behavior are linked. Find some sources to get you started.
2. Your Education professor has assigned you a presentation on the Theory of Multiple Intelligences. Find some peer-reviewed sources on this topic.

The first two questions showed us some interesting things about Summon 2.0:

• All the students loved the right hand panel that gives previews of items in the search results. (This was a surprise to many of us, who didn't think it was useful at all. I never thought it would be so popular.)
The revised non-keyword results screen in Sierra

The new page makes it clear that your search was not successful, and makes it easy to find the help prompts. In addition, it keeps the contextual list of nearby results, which might be helpful if you've spelled something wrong. I pushed this page live already, so if you use the catalog you should already see it. For the technically inclined, I've posted the code that makes this work to Github.

I also watched a few students use the Find Books search type dropdown with no apparent difficulty, and combined with the frequency those specialized searches get used, I don't think changing the order of the search items in the catalog (as suggested last month) is something we'll pursue.

I did, however, watch students once again get confused by the “Nearby on Shelf” button. One student leaned in so close to the screen to try to read the tiny button that I thought he would get a nose print on the glass. I think I'll try changing the label to something more understandable like “Browse Similar Items” and make it a text link instead of an image (as suggested last month).

Running a usability test on our website every month is a lot of work, but it has helped us really hammer away at some of the big issues facing our patrons. Thanks for participating, and I look forward to seeing everyone next month!

Next month our test will be on Friday, March 14th. I want to spend some time testing the right-hand panel of Summon 2.0, specifically with searches that might bring up suggested librarians, LibGuides, and other help features. Bob has already volunteered to help, but if another LibGuides owner wants to work with me to get their metadata set up and craft some good questions for the next test, I'd appreciate it!

Why a Journal of Library User Experience?

Libraries now provide services rather than collections, and so the experience of library users is more important than ever. While new jobs are being created for User Experience librarians and Circulation departments are being renamed “User Experience” Teams, there is still no comprehensive, rigorous publication for Library UX professionals to share with and learn from their colleagues. WeaveUX helps practitioners and theorists come together to make libraries better.
